Microsoft System Engineer | Microsoft 365 | Azure AD (Entra ID) | Intune | Exchange Online | Microsoft Teams | Active Directory | Hybrid Identity | MFA | Conditional Access | Endpoint Management

Summary

- **Microsoft System Engineer** with **6+ years** of hands-on experience managing and supporting enterprise **Microsoft 365** environments for global users. Strong focus on identity and access management across **Azure AD (Entra ID)** and **on-prem Active Directory**, including hybrid setups.
- Experienced in **Exchange Online**, **Microsoft Teams**, **Intune**, and **MFA**, with a practical approach to securing access, managing user lifecycles, and maintaining endpoint compliance. Regularly handle complex issues across identity, messaging, and access, ensuring minimal disruption in production environments.
- Comfortable working in 24x7 support models, managing incidents end-to-end, handling escalations, and driving root cause analysis. Known for balancing security with usability while supporting distributed teams and remote users.
- Microsoft-certified in **Microsoft 365** and Azure, looking for a fully remote role where I can take ownership of cloud operations and contribute to a stable, secure, and scalable environment.

Skills

- **Identity & Access Management** – Azure AD (Entra ID), Hybrid AD, Conditional Access, MFA, Okta
- **M365 & Collaboration** – Microsoft 365, Teams, SharePoint Online, Slack
- **Messaging Systems** – Exchange Online, Hybrid Exchange
- **Endpoint Management** – Intune, SCCM, DaaS
- **Scripting / Automation** – PowerShell
- **IT Operations** – ITOM, Monitoring & Alerting
- **Ticketing / Support Tools** – Remedy, Jira, AutoTask, Quick Assist

Professional Experience

Technical Support Freelancer Magnite Business Solutions, Remote	Feb 2026 – Present
--	---------------------------

Responsibilities

- Took ownership of identity and device management for US-based law firm clients, handling everything from initial setup to ongoing administration without a team backing me.
- Managed users, groups, and access policies in Azure AD, making sure attorneys and staff had the right level of access without overexposing sensitive legal data.
- Set up and maintained conditional access policies to tighten security, especially around remote logins and access from unmanaged devices.
- Handled onboarding and offboarding of employees, ensuring new hires could start smoothly while departing users were fully deprovisioned with no loose ends.
- Worked extensively with Microsoft **Intune** to enroll and manage company devices, including laptops and mobile devices used by legal staff working remotely.
- Created and enforced device compliance and configuration policies to keep systems aligned with security standards expected in a legal environment.
- Deployed applications and updates through **Intune**, reducing manual setup time and keeping devices consistent across users.
- Troubleshoot login issues, device sync problems, and policy conflicts, often being the single point of contact for resolving access or device-related disruptions.

- Coordinated directly with clients to understand their workflows and adjusted policies to balance usability with strict data protection requirements.
- Monitored security and sign-in activity, responding to suspicious behavior and tightening controls when needed.
- Helped standardize processes across different clients, so even though each firm had its own setup, the management approach stayed efficient and scalable.
- Kept documentation of configurations and changes, making it easier to maintain continuity and quickly resolve issues later on.

System Engineer

April 2023 – Feb 2026

FutureXcel Technologies, Remote

Responsibilities

- Administered and supported a global **Microsoft 365** environment in a production enterprise setting, with hands-on responsibility across **Exchange Online, Azure AD, Intune, and M365 Security & Compliance**, ensuring platform stability, performance, and availability for geographically distributed users.
- Delivered comprehensive **Exchange Online** administration, including shared and resource mailbox provisioning, mailbox restoration, delegation (Send as / Send on Behalf), and distribution group management, supporting both end-user and service/application mailboxes.
- Maintained and supported a **hybrid Exchange infrastructure**, managing mail gateways, mail routing rules, connectors, and anti-spam/anti-malware configurations, and resolving mail flow issues across cloud and on-prem environments.
- Provided advanced **Intune administration**, managing device enrollment, compliance policies, conditional access enforcement, and endpoint security controls, along with application deployment, updates, and remediation across managed Windows and mobile devices.
- Configured and managed **Microsoft 365 Security & Compliance** capabilities, including retention policies, audit logging, DLP policies, and eDiscovery cases, ensuring compliance with internal governance standards and regulatory requirements.
- Administered **Azure Active Directory** and **AD Connect**, resolving directory synchronization failures, object and group filtering issues, password hash sync problems, and identity-related authentication and access issues.
- Demonstrated strong hands-on experience with **Okta**, administering user lifecycle management, group assignments, application integrations, and access policies, and supporting **SSO** and **MFA** configurations to ensure secure and seamless access to **SaaS applications**.
- Played a key role in **Okta** troubleshooting and operations, investigating authentication failures, **MFA** challenges, and application access issues, and working closely with identity and security **Teams** to resolve escalated incidents.
- Provided enterprise-level administration and operational support for **Slack**, managing workspace configurations, user provisioning/deprovisioning, role assignments, channel governance, and security settings, ensuring effective collaboration while maintaining compliance and access controls.
- Supported **Slack** integrations and issue resolution, including troubleshooting login, access, and workspace issues, and coordinating with internal stakeholders and vendors to restore service quickly during incidents.
- Utilized **PowerShell** scripting extensively to automate administrative tasks, perform bulk user and mailbox operations, accelerate incident resolution, and reduce manual operational effort across **M365** and identity services.
- Conducted in-depth root cause analysis (RCA) for critical and recurring incidents affecting messaging, identity, endpoint, or SaaS services, implementing long-term corrective and preventive actions to improve service reliability.
- Acted as a primary escalation point for complex L2/L3 tickets, taking full ownership of high-impact incidents escalated from L1 support and ensuring resolution within defined SLA and operational targets.
- Collaborated directly with **Microsoft, Okta**, and other SaaS vendors for critical and escalated issues, coordinating diagnostics, remediation activities, and formal RCA documentation.

- Actively participated in ITIL-aligned incident, change, and problem management processes, including change planning, risk analysis, implementation, post-change validation, and continuous service improvement initiatives.
- Maintained detailed operational documentation, runbooks, and support procedures, enabling consistent service delivery and effective knowledge transfer across global support **Teams**.

**Sr. Customer Technical Support,
VOIS (Vodafone Intelligent Solutions), Remote**

Feb 2022 - March 2023

Responsibilities

- Provided first-line (L1/L2) operational support for **Microsoft 365** users across the organization, handling password resets, **MFA** challenges, login failures, and account unlocks, ensuring minimal user downtime and a positive end-user experience.
- Supported end-to-end user onboarding and offboarding processes, including **Exchange Online** mailbox provisioning, license assignment, access validation, and administrative role management, ensuring compliance with access control and security policies.
- Assisted users with Outlook client configuration and troubleshooting, resolving connectivity, profile, and synchronization issues, and provided hands-on support for **Microsoft Teams**, OneDrive, and SharePoint Online access and usability issues.
- Performed day-to-day mailbox administration tasks, including distribution list membership management, email forwarding configuration, mailbox quota monitoring, and shared mailbox access, supporting both individual users and business **Teams**.
- Provided operational support for mobility and **Intune**-related issues, assisting users with device enrollment, compliance checks, and access problems on corporate-managed devices.
- Monitored and resolved email delivery and mail flow issues, including investigation of spam filtering, quarantine actions, and message trace analysis, ensuring reliable and secure email communication.
- Utilized AutoTask ticketing system to log, track, prioritize, and resolve incidents and service requests, adhering to defined SLAs, and escalating complex or unresolved issues to L2/L3 **Teams** with detailed diagnostic information.
- Performed daily operational health checks across Office 365 services, including **Exchange Online**, **Microsoft Teams**, SharePoint Online, and OneDrive, proactively identifying service degradation and coordinating remediation efforts.
- Followed established support processes and runbooks, ensuring consistent issue handling, proper documentation, and effective knowledge transfer across support **Teams**.
- Communicated clearly with users and stakeholders during incident resolution, providing status updates, guidance, and post-resolution validation to confirm service restoration.

**Customer Technical Support,
Tech Mahindra, Pune, IN**

Feb 2021 - Feb 2022

Responsibilities

- Provided first-line technical support for **Microsoft 365** users, troubleshooting login issues, password resets, **MFA** failures, and account unlocks to maintain uninterrupted access.
- Managed user onboarding and offboarding processes, including mailbox creation, license assignment, and basic role access configuration.
- Supported day-to-day operations of Outlook, **Microsoft Teams**, OneDrive, and SharePoint Online, resolving connectivity, synchronization, and usability issues.
- Assisted in installation, setup, and configuration of Office 365 applications on desktops, laptops, and mobile devices for corporate users.
- Monitored email delivery, mail flow, and spam quarantine, performing initial analysis and escalating unresolved issues to L2 support **Teams**.
- Provided guidance and support for basic **Microsoft 365** client usage, helping new users understand collaboration tools and features effectively.

- Used Remedy and Salesforce CRM to log, track, prioritize, and resolve tickets in line with defined SLA and support processes.
- Handled basic mailbox management tasks, including distribution group membership updates, mailbox access validation, and email forwarding configuration.
- Assisted with device enrollment and **Intune** support, troubleshooting compliance and access issues for corporate-managed devices.
- Maintained detailed documentation and knowledge base articles, ensuring consistent troubleshooting practices and effective handoff to higher-level support Teams.
- Coordinated with L2/L3 support Teams for escalated issues, providing complete incident details, logs, and diagnostics for faster resolution.
- Participated in daily operational checks for **Microsoft 365** services, identifying potential service disruptions proactively.
- Supported hybrid Exchange environments in collaboration with senior administrators, ensuring smooth mail flow between on-premises and cloud.
- Assisted in enforcing basic security policies, **MFA** compliance, and access control measures in line with corporate IT standards.
- Developed strong end-user communication skills, providing clear instructions, updates, and follow-ups to ensure timely problem resolution and user satisfaction.

Jr. Customer Technical Support, Concentrix Service, Pune, IN

Jan 2020 – Jan 2021

Responsibilities

- Provided first-level technical support to users, assisting with product-related technical issues and basic troubleshooting, ensuring timely resolution and minimal downtime.
- Managed ticket logging and tracking in the internal support system, ensuring adherence to SLA and proper documentation of all incidents.
- Supported users with hardware and software-related inquiries, guiding them through installation, configuration, and operational steps.
- Assisted with technical issue escalation to senior support Teams (L2/L3), providing detailed issue logs and diagnostic information for faster resolution.
- Monitored and followed up on incident resolution progress, maintaining clear communication with users and ensuring updates were provided until closure.
- Participated in end-to-end support for product returns and replacements, verifying technical issues and coordinating with internal Teams to ensure accurate resolutions.
- Assisted in onboarding new users to products, providing initial guidance, setup instructions, and troubleshooting support.
- Developed experience in ticket prioritization, workflow management, and incident categorization for efficient resolution of recurring issues.
- Followed standard operating procedures and internal technical documentation, ensuring consistent support practices.
- Gained exposure to basic troubleshooting of software, email, and connectivity issues, laying the foundation for later M365 and enterprise IT support roles.
